28 November 2012

In support of the Africa innovation Competition

Two of our members, Cathy Khoury-Prinsloo and Wayne Robb, researched and developed the Grass Roll Saver.

We know that they have been very original in their idea as it addresses an area which few people have done such intensive research in. The benefits of using this product will have a positive impact for cattle owners and Africa in particular, where frequent droughts affect the availability of grass fodder for animals.

As drought is such a real problem for our environment, we believe in this innovative product as it will prevent waste, save money and every animal owner can benefit. This product deserves attention!

Thank you,

Jean McAllister

Administrator for The Institute of Inventors and Innovators in South Africa

On behalf of the III Executive
